Sosform[®]

The heavy-duty shears 56-0 has been developed especially for high rules. The cutting capacity is up to 100.00 mm high medium hard steel rules in maximum 6 pt thickness. The heavy-duty design ensures an absolutely straight cut without twisting the rule in any way.

As standard the machine is delivered with an 800 mm long guide on the left hand side and a tool set for straight cutting.

As an option an 800 mm long guide and a 700 mm long caliper gauge can be added to the right hand side (picture).
